### Section I - Product Identification

A solution of zinc sulfate, acetic acid and alcohols in water.

### Section II - Hazards Identification

*Overview:* Toxic by inhalation absorption or ingestion. Can not be made nontoxic. Methanol is a cumulative poison and death has been reported for ingestion of less than 30 milliliters. Causes CNS depression, headache, intoxication, dilation of the pupils, convulsions nausea, and dizziness. Methanol intoxication may produce visual disturbances and blindness. Zinc sulfate is slightly toxic

#### Safety Ratings

*Health:* Hazardous *Flammability:* Highly flammable liquid and vapor *Reactivity:* Slight *Contact:* Slight

Recommended safety equipment: safety goggles, lab coat and proper gloves

*Storage:* Keep cool, away from sources of ignition in a well ventilated area.

#### NFPA Ratings

Health = 2 Flammability = 3 Reactivity = 1

#### Potential Health Effects

The toxicology of this compound have not been completely examined. It is presumed that the toxicity of this item is similar to that of other zinc compounds.

*Inhalation:* Alcohols are absorbed through the mucous membranes and can produce irritation as well as the same effects as ingestion.

*Ingestion:* Inhalation can produce CNS disturbance, dizziness, photophobia, etc.

*Skin contact:* Alcohols are absorbed through the skin. Chronic contact with alcohols causes defatting of the skin with resultant irritation and flaking. Chronic contact with zinc sulfate can cause systemic poisoning.

*Eye contact:* Irritating and corrosive.

*Chronic Exposure:* Unknown.

*Aggravation of preexisting conditions:* Impaired kidney and liver function may be aggravated by exposure to alcohols and/or zinc sulfate. Preexisting eye, skin, and respiratory conditions may also be aggravated. Methanol has shown genetic toxicity in some animals.

## Section XII - Ecological Information

*Environmental Fate:* Not biodegradable.

*Environmental Toxicity:* Toxic to aquatic organisms.

Ethanol evaporates quickly and is not expected to bioaccumulate. The material is removed from the air by dry and liquid adsorption. The half-life for ethanol in the atmosphere is one to ten days. Zinc sulfate will bioaccumulate.

---

## Section XIII - Disposal Considerations

Many localities restrict the amount of zinc compounds that may be flushed down the drain. Insure compliance with all government regulations.

---

## Section XIV - Transportation Information
